RAPID MOSS AND ALGAE KILLER

BATIFACE is a surface biocide to destroy micro-organisms generating mould, fungus, algae, moss, etc... It works quickly to destroy growth, ***giving a new appearance to walls, roofs and driveways including tarmac.***

BATIFACE is used pure. Once sprayed on to the surface it starts working immediately. After 1-2 hours the area should be rinsed with a pressure washer or garden hose (60 to 80 bars). Average coverage on non-porous surfaces is approximately 7m² per litre. During use wear protective gloves and glasses. Do not use on aluminium, near acids or near delicate plants/flowers.

MOSS AND ALGAE KILLER

BATIMOSS is available ready for use or as a concentrate for dilution in water. It will remove moss, lichen, algae, greening, acting systemically to destroy the moss and root system over a few days. Left on the surface without rinsing, it will act as a level of protection against future growth.

BATIMOSS is applied pure, on a dry surface by spray or wash at approximately 1 litre per 6-7m².

BATIMOSS is neutral and can also be applied on internal surfaces, such as on walls before paint or wallpaper to prevent the future growth of mould.

Uses: Roofs: slate, tiles, fibrocement, thatch, pre-painted sheets, etc...

Walls: stone, raw cement, plaster, wood, siding sheets, painted walls etc...

Other ; pool surrounds, tennis courts, driveways, slipways for boats, play areas, furniture etc...

BATIMOSS CR is the concentrated version, dilution rate 1 part to 4 parts water and used as **BATIMOSS**.

MOSS AND ALGAE KILLER WITH WATER REPELLENT

HYDROMOSS has a dual action, killing moss, algae, lichen and mould as well as leaving water repellent on the surface. This gives additional protection to hard surfaces against rain and water degradation as well as preventing future growth

Shake or stir before and during use. Treatment area should be completely covered with product at a rate of approximately 1-litre per 4-5m². Use during dry conditions at 15-25°C and DO NOT RINSE. If used after rain, wait 24 hours before treatment.

CONCRETE CLEANER

SP STRIP is a liquid used to clean soiled surfaces such as concrete, brickwork, mortar. It will degrease concrete floors before painting and remove oil or fuel stains from driveways. It will also remove traces of cement after tiling.

SP STRIP is used pure or diluted by 50%. Let act for several minutes whilst brushing. Rinse with clean water. Repeat operation if traces remain. During use wear protective gloves and glasses.
